Name: Mokhtar Husein **ID: 2024030141**
Name: Mohamed Mahmoud Refai **ID: 2024030132**
Name: Hazem Fawzy Shafik **ID: 2024030039**
Department: Computer Science ,2024
Material: Software Engineer

Task:2

1.Build a comparison table for the five models

Comparison Models					
Model	**Flexibility**	**Risk handling**	**Client involvement**	**Documentation**	**Cost of change**
Waterfall	Low	Weak	Low	Very high	High
Incremental	Medium	Medium	Medium	Medium	Medium
Prototype	High	Medium	Very high	Low	Low early on
Spiral	High	Strong	High	High	Medium
Agile	Very high	Good	Very high	Light	Low

2. Choose and justify a model for 4 scenarios: banking system, small website, research prototype, safety-critical system

1. **Banking system:**
   - **Spiral model:** It features strong risk handling and is ideal for large, costly, or highly risky projects.

Restricted Information and Basic Personal Data

2. **Small website:**
    - **Agile model.** It offers very high flexibility, operates in short cycles (sprints), and handles changing requirements effectively.

3. **Research prototype:**
    - **Prototype model.** It is perfect when requirements are unclear, allowing you to build a quick draft, collect feedback, and refine it before building the real system.

4. **Safety-critical system:**
    - **Waterfall model:** It works best when requirements are strictly fixed and clear, providing very high documentation and requiring each phase to finish completely before the next begins.
